

Slurry and manure are wonderful things and want to be used.

Agriculture is based on a natural cycle as a perpetuum mobile with an additional FUN FACT "TRACTOR driving"

Everybody talks about excessive „fertilizer use“ regulations for reduction of fertilizer use and limiting period of spreading manure and slurry.

Reality is simple=on fields and grassland used organic. Fertilizer simply act in long terms

The yield potential of cash crops cannot be used at its optimum.

Using agro chemicals and medicaments will delay the effect of organic fertilizer additionally.

In practise has shown a significant positive effect when using HC-tractor exhaust gas.

The easiest matter in world practise, agriculture sustainable protecting environment with healthy guaranty for humans, animals and nature.

In meat production is the ammoniac pollution a significant matter.

Ammoniac is quickly fixed by fungus (mould fungus).

That mould fungus will be transformed into useful fertilizer, after a certain time. Than feed elements and nitrogen be available for the crop.

Using HC+CO₂ exhaust gas will highly speed up this process of mould fungus and quickly remove other toxic components. Weed loses its justification to exist and the main crop receive a healthy push in development.

In addition is carbon collected from the atmosphere and stored as quality and yield.

Automatically will arise herb cultures, which are attracting useful insects.

ACRICULTURE=WORLD CARTEN

FIRE:

Let us use the fire of our tractors as a Turbo in production of feed and food as well as biological replacements of fossil basic material.

Let we participate the animals in milk and beet production, on the flamenco taste of the feed.

SUN is the most beautiful GIFT of the world.

Pleasure and piece at highest level.

SOIL:

Cut gaps into grassland 1-3 cm wide 3-8cm deep.

Add slurry with value addition using fine milled rocks with ceolite and HC+CO₂ tractor exhaust gas.

WATER:

Optimal climate for micro-organism. Rainworms and useful insects let them play a real environment protection performance.

Guaranteed highest yield at conserved water demand environment protection at highest niveau.

EXTREME draught – every fruit was full.

AIR

Protection of surrounding as neighbourhood will get convenient smell.

Optimum in transferring fertilizer into yield and quality= additionally decarbonisation of atmosphere.

Great possibility for securing profit in agriculture.

An orchestra with feeling and pleasure and a golden sound is named world orchestra.

The DISCO-FIX plays a melody, which let enjoy every use, the beauty of agriculture.

Every farmer spreads out a sound cloud around his land, which attracts the people (customers) from up to date hidden pleasure and Sympathies.

Gülle intelligent NUTZEN!
